

Prescription Nails the fully professional alternative to Acrylic or Gel. Fast application, odour free, stronger and longer lasting.

I am the first person who tried Prescription Nails in Australia, back in August 2004! I liked it then and i still swear on how good this product is. I am probably the person that knows the product better than everybody else in Australia does

Josephine Scarfone - Owner

Prescription Nails only available at Nails r Us

Prescription Nails are a real revolution in the way we service clients with nails enhancements. They are called "Prescription" Nails because each set is carefully prescribed - the curvature and arch of each nail is precisely measured and recorded on a client's personal prescription card. The nails are custom fitted to the client's nail shape and size - producing nail enhancements that have a very natural look and feel. The advantages of choosing Prescription Nails over gels or Acrylics are:

- No refill is needed;
- No painful removal is needed;

- Non-damaging sanding & buffing need to be performed;
- No damaging electric drills is used;
- Each set lasts for up to 3 - 4 – please do not trust people that guarantee it only for two weeks. They do not know how to apply Prescription Nails.
- Thin, durable, natural look and feel;
- Great for nail biters and those concerned about protecting the natural nail bed;

These wonderful enhancements are clear, full-cover nail extensions that are custom designed for application on top of the entire natural nail bed. They are durable and last up to two three weeks. They are easily soaked off in about 15 minutes in acetone when professionally removed at the salon. You can have a new full set of nails every time without suffering painful prying or drilling.

Prescription Nails also help grow your natural nails. They provide a protective cover over the entire nail bed - preventing breakage as the natural nails grow. **When you get your FREE soak-off removal every time**, your nails are examined to make sure that your nail beds are staying healthy.

The length of your natural nails doesn't matter. You might be a nail biter with no length at all. You might have short or medium length natural nails. Prescription Nails are clear, you can see the length of the natural nail through the tips, so the natural nails are usually shortened for best results.

Prescription Nails are lightweight so they are comfortable to wear. Many women have told me

that their friends thought that the Prescription Nails were natural nails. If you want a healthier enhancement, method that produces beautiful nails that look and feel just like your own then you need Prescription Nails.

Twice as fast as traditional method, superior quality and durability, absence of fumes and dust, healthier nail plates and spectacular results, are the virtues of this revolutionary product.

Testimonials

I was lucky with some "assets", but not others. Fingernails are not one of my best assets. My nails are so thin that they break when the wind changes and I've tried every nail hardening product and any method on available on the market unsuccessfully.

So, i thought that considered the amount of money I spend for may fingernails as well as time I spend with my hands in front of a client, I'm a little conscious of my nails and their naturally tatty appearance.

For some years I have tried acrylic nails, which wrecked my nails, and how long it took to soak them off. I have also tried Gels, but they did not work for me.

When I discovered a new form of nail extension called Prescription Nails I decided to try them. They're a a full cover nails system, which protects your natural nails and let them grow, and your nail technician has over 128 different shapes and sizes fit your nail plate perfectly.

What I like about them is that they wear down a little, so you don't end up with super long nails as they grow, they also wear to a very natural finish. People are generally surprised when they find out my nails are not my own, as they wear and complement my fingers perfectly even after a couple of weeks.

The nails are light and strong, like an acrylic, polish doesn't chip, but unlike an acrylic or gel nail, there is no filing of your natural nail bed, toxic chemicals or any of that other rigmarole.

I recommend Nails r Us because the owner is the most experienced technician i have met in 15 years.

Michelle Matthews - National Australian Bank Senior Financial Planning Manager

Your nails look gorgeous, Imogen. I have just had gels put back on after many years but will certainly try these if the gels don't work out.
